PATHWAY: L-arabinose catabolism; second step.

INDUCTION: Transcription is repressed by glucose and by the binding of arak to the operon promoter. L-arabinose acts as inducer by inhibiting the binding of arak to the DNA, thus allowing expression of the gene.

SIMILARITY: BELONGS TO THE RIBULOKINASE FAMILY.

CAUTION: WAS THOUGHT BY REF. 3 TO BE A HUMAN SEQUENCE AND WAS CALLED BY THEM BRAG1 (BRAG1-1)

WITH A ROLE IN APOPTOSIS. THE DNA SEQUENCE OF THE REGION THEI SEQUENCED IS MORE THAN 99% IDENTICAL TO THAT OF THIS E. COLI SEQUENCED IS MORE THAN 99% IDENTICAL TO THAT OF THIS E. COLI GENE. FURTHERMORE THEY CLAIM 'EXTENSIVE SIMILARITY TO THE BCL-2 FAMILY OF GENES.' SUCH A SIMILARITY IS NOT SIGNIFICANT AND THIS PROTEIN IS MUCH MORE LIKELY TO BE A SUGAR KINASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SIMILARITY: BELONGS TO THE FUCOKINASE
